

agentize.eu PoC — Teljes Technikai Specifikáció

Verzió: 1.0 **Dátum:** 2026-02-26 **Cél:** Vibe-coding reference — minden információ egy helyen a PoC implementálásához **Időkeret:** 10 munkanap

1. PROJEKT ÁTTEKINTÉS

1.1 Mi ez?

Enterprise AI platform PoC, amely Microsoft Teams-be (és Telegram-ba) integrált AI ügynököt biztosít, az ügyfél Azure előfizetésében futva, VNET izolációval, EU Data Zone Standard telepítéssel.

1.2 PoC Scope — KRISTÁLYTISZTA

BENNE VAN:

- Azure infrastruktúra Bicep template-ből (1 gombnyomás deploy)
- FastAPI backend + LangGraph agent orkestráció
- Teams Bot + Telegram Bot (Bot Framework, multi-channel)
- Adaptive Cards interakció (többpontos jóváhagyás)
- PDF generálás (az elsődleges output formátum)
- Web app PDF letöltéshez (ha SharePoint integráció nem fér bele)
- Cosmos DB state management + LangGraph checkpointing
- Entra ID app registration + SSO
- EU AI Act átláthatósági jelölés minden AI output-on
- Basic VNET izoláció

NINCS BENNE:

- Azure AI Search / RAG — NEM dokumentumokból dolgozunk, hanem user input-ból
- Hallucináció framework (confidence scoring, golden dataset) — a többpontos jóváhagyási workflow kezeli
- Private Link full hardening (7 pontos checklist)
- TISAX dokumentáció
- React Tab szerkesztő (Adaptive Card elég)
- SharePoint mentés (web app-ból letölthető PDF)
- Multi-tenancy
- Metered billing
- Managed Application wrapper (sima resource group + RBAC)

1.3 Kulcsdöntések (Péter feedback alapján)

- 1. **Nincs AI Search** — az agent user input-ból dolgozik, nem dokumentum-RAG-ból. Ha később kell RAG, az "bővített csomag".
- 2. **Nincs külön hallucináció framework** — folyamatos interakció + többpontos jóváhagyás van beépítve a workflow-ba.
- 3. **PDF kell** — a jelenlegi outputok PDF-ben készülnek, ez a PoC-ban is kell.
- 4. **Telegram támogatás** — a Bot Framework natívan kezeli, +1 channel bekapcsolás.
- 5. **Nem Managed App** — PoC-ban sima resource group + explicit RBAC. IP védelem szerződéses.
- 6. **Token költség → agent vendor** — a platform infra fix, az LLM fogyasztás az agent vendor dolga.

2. ARCHITEKTÚRA

2.1 High-Level Architecture

2.2 Request Flow

- Cosmos DB: request, LLM version, approval timestamp, user ID
- Notification: "A dokumentum elkészült: [letöltés link]"

2.3 Data Flow — Részletes

1. User → Teams/Telegram: "Készíts egy TWI utasítást a CNC-01 gép beállításáról"

2. Bot Service → FastAPI: POST /api/messages

```
{
  "type": "message",
  "text": "Készíts egy TWI utasítást...",
  "from": { "id": "user-entra-id", "name": "Kovács János" },
  "channelId": "msteams" | "telegram",
  "conversation": { "id": "conv-123" }
}
```

3. FastAPI → LangGraph: invoke graph with state

```
{
  "user_id": "user-entra-id",
  "tenant_id": "tenant-123",
  "channel": "msteams",
  "message": "Készíts egy TWI utasítást...",
  "conversation_id": "conv-123",
  "history": [...previous messages...]
}
```

4. LangGraph Intent Node → "generate_twi"

5. LangGraph Generation Node → AI Foundry API:

POST <https://<endpoint>.swedencentral.inference.ai.azure.com/chat/completions>

```
{
  "model": "mistral-large-latest",
  "messages": [
    { "role": "system", "content": "<TWI system prompt>" },
    { "role": "user", "content": "Készíts egy TWI utasítást..." }
  ],
  "temperature": 0.3,
  "max_tokens": 4000
}
```

6. LangGraph Review Checkpoint → INTERRUPT

Bot sends Adaptive Card to user with draft

7. User approves → LangGraph resumes

8. LangGraph Output Node → PDF generation → Blob Storage

Bot sends download link to user

9. Audit log → Cosmos DB

3. INFRASTRUKTÚRA — BICEP SPECIFIKÁCIÓ

3.1 Resource Group Struktúra (PoC)

```
Resource Group: rg-agentize-poc-swedencentral

3.5 Azure AI Foundry

bicep

```
// Azure AI Foundry (korábban AI Model Catalog)
// KRITIKUS: Data Zone Standard, Sweden Central

resource aiFoundry 'Microsoft.CognitiveServices/accounts@2024-04-01-preview' = {
  name: 'ai-${projectPrefix}'
  location: location // swedencentral
  kind: 'AIServices'
  sku: { name: 'S0' }
  properties: {
    customSubDomainName: 'ai-${projectPrefix}'
    publicNetworkAccess: 'Enabled' // PoC-ban OK, MVP-ben Disabled + Private Endpoint
    // Data Zone Standard — EU adatrezidencia garancia
    // FONTOS: Csak Sweden Central és Germany West Central ad szerződéses EU garanciát
  }
}

resource aiDeployment 'Microsoft.CognitiveServices/accounts/deployments@2024-04-01-preview' = {
  parent: aiFoundry
  name: aiModel
  sku: {
    name: 'DataZoneStandard' // NEM Global Standard!
    capacity: 10 // TPM (tokens per minute) in thousands
  }
  properties: {
    model: {
      format: 'MistralAI' // vagy 'OpenAI' ha GPT-4o
      name: aiModel
      version: 'latest'
    }
  }
}
```

3.6 Cosmos DB

bicep

```

resource cosmosAccount 'Microsoft.DocumentDB/databaseAccounts@2023-11-15' = {
  name: 'cosmos-${projectPrefix}'
  location: location
  kind: 'MongoDB'
  properties: {
    databaseAccountOfferType: 'Standard'
    locations: [{ locationName: location, failoverPriority: 0 }]
    capabilities: cosmosThroughputMode == 'serverless'
      ? [{ name: 'EnableServerless' }, { name: 'EnableMongo' }]
      : [{ name: 'EnableMongo' }]
    publicNetworkAccess: 'Enabled' // PoC-ban OK
    // MongoDB API — kompatibilis a meglévő kódázissal
  }
}

resource cosmosDb 'Microsoft.DocumentDB/databaseAccounts/mongodbDatabases@2023-11-15' = {
  parent: cosmosAccount
  name: '${projectPrefix}-db'
  properties: {
    resource: { id: '${projectPrefix}-db' }
  }
}

// Collections — lásd a 6. szekciót a sémákhoz

```

3.7 Blob Storage + Key Vault + App Insights

bicep

```

resource storageAccount 'Microsoft.Storage/storageAccounts@2023-01-01' = {
  name: replace('st${projectPrefix}', '-', '')
  location: location
  sku: { name: 'Standard_LRS' }
  kind: 'StorageV2'
  properties: {
    publicNetworkAccess: 'Enabled' // PoC-ban OK
    allowBlobPublicAccess: false
    minimumTlsVersion: 'TLS1_2'
  }
}

resource blobContainer 'Microsoft.Storage/storageAccounts/blobServices/containers@2023-01-01' = {
  name: '${storageAccount.name}/default/pdf-output'
  properties: { publicAccess: 'None' }
}

resource keyVault 'Microsoft.KeyVault/vaults@2023-07-01' = {
  name: 'kv-${projectPrefix}'
  location: location
  properties: {
    sku: { family: 'A', name: 'standard' }
    tenantId: subscription().tenantId
    enableRbacAuthorization: true
    publicNetworkAccess: 'Enabled' // PoC-ban OK
  }
}

resource appInsights 'Microsoft.Insights/components@2020-02-02' = {
  name: 'ai-${projectPrefix}-insights'
  location: location
  kind: 'web'
  properties: {
    Application_Type: 'web'
    RetentionInDays: 30
  }
}

```

3.8 Azure Bot Service

bicep

```
resource botService 'Microsoft.BotService/botServices@2022-09-15' = {  
  name: 'bot-${projectPrefix}'  
  location: 'global' // Bot Service mindig global  
  kind: 'azurebot'  
  sku: { name: 'S1' }  
  properties: {  
    displayName: 'agentize.eu PoC Bot'  
    description: 'Enterprise AI Platform PoC'  
    endpoint: 'https://${backendApp.properties.configuration.ingress.fqdn}/api/messages'  
    msaAppId: botAppId  
    msaAppType: 'SingleTenant'  
    msaAppTenantId: subscription().tenantId  
  }  
}
```

// Teams channel

```
resource teamsChannel 'Microsoft.BotService/botServices/channels@2022-09-15' = {  
  parent: botService  
  name: 'MsTeamsChannel'  
  location: 'global'  
  properties: {  
    channelName: 'MsTeamsChannel'  
    properties: { isEnabled: true }  
  }  
}
```

// Telegram channel (opcionális)

```
resource telegramChannel 'Microsoft.BotService/botServices/channels@2022-09-15' = if (telegramBotToken != "") {  
  parent: botService  
  name: 'TelegramChannel'  
  location: 'global'  
  properties: {  
    channelName: 'TelegramChannel'  
    properties: {  
      accessToken: telegramBotToken  
      isEnabled: true  
    }  
  }  
}
```

12. IMPLEMENTÁCIÓS SORREND — 10 MUNKANAP

Nap 1-2: Infrastruktúra

- ☐ Bicep template megírás (main.bicep + parameters.json)
- ☐ `az deployment group create` — test deploy Sweden Central-ba
- ☐ AI Foundry model deployment (Mistral Large, Data Zone Standard)
- ☐ Entra ID App Registration (Bot Framework-höz)
- ☐ Key Vault secrets feltöltés
- ☐ Cosmos DB collections + indexek létrehozás
- ☐ Blob Storage container létrehozás
- ☐ **Validáció:** minden resource elérhető, AI Foundry válaszol

Nap 3-4: Backend Core

- ☐ Projekt struktúra létrehozás (lásd 4.1)
- ☐ `app/config.py` — Settings osztály
- ☐ `app/services/ai_foundry.py` — LLM client + test hívás
- ☐ `app/services/cosmos_db.py` — MongoDB client + test CRUD
- ☐ `app/agent/state.py` — AgentState definíció
- ☐ `app/agent/nodes/intent.py` — Intent recognition
- ☐ `app/agent/nodes/generate.py` — TWI generálás
- ☐ `app/agent/graph.py` — Alap gráf (intent → generate → END)
- ☐ **Validáció:** `pytest` — intent felismerés + generálás működik

Nap 5-6: Bot Framework + Adaptive Cards

- ☐ `app/main.py` — FastAPI + /api/messages endpoint
- ☐ `app/bot/bot_handler.py` — Message handler
- ☐ `app/bot/adaptive_cards.py` — Review + Approval + Result + Welcome cards
- ☐ Azure Bot Service resource regisztráció
- ☐ Teams channel + Telegram channel bekapcsolás
- ☐ Teams App Manifest (sideload-hoz)
- ☐ **Validáció:** Teams-ből üzenet → Bot válaszol Adaptive Card-dal

Nap 7-8: Human-in-the-loop + Revision Loop

- ☐ `app/agent/nodes/review.py` — Review checkpoint
- ☐ `app/agent/nodes/revise.py` — Revision node
- ☐ `app/agent/nodes/approve.py` — Final approval checkpoint
- ☐ Graph interrupt_before konfigurálás
- ☐ Bot handler: Adaptive Card submit → graph resume
- ☐ Revision loop tesztelés (max 3 kör)
- ☐ **Validáció:** Teljes flow: generálás → review → szerkesztés → jóváhagyás

Nap 9: PDF + Output

- ☐ `app/templates/twi_template.html` — Jinja2 template
- ☐ `app/agent/tools/pdf_generator.py` — PDF generálás (WeasyPrint)
- ☐ `app/services/blob_storage.py` — PDF upload + SAS URL
- ☐ `app/agent/nodes/output.py` — Output node
- ☐ `app/agent/nodes/audit.py` — Audit log node
- ☐ Dockerfile + local build + test
- ☐ **Validáció:** PDF generálódik, letölthető URL-ről, audit log Cosmos DB-ben

Nap 10: Integration Test + Demo Prep

- ☐ End-to-end teszt: Teams → Bot → Agent → PDF → letöltés
 - ☐ End-to-end teszt: Telegram → Bot → Agent → PDF → letöltés
 - ☐ Container App deployment (GitHub Actions vagy manuális)
 - ☐ Demo script megírás (3 perces happy path)
 - ☐ Known issues dokumentálás
 - ☐ **Validáció:** Demo futtatás valós Teams + Telegram környezetben
-

13. DEMÓ SCRIPT (3 perc)

1. [Teams-ben] "Szia! Készíts egy TWI utasítást a CNC-01 gép napi karbantartásáról."
→ Bot: "⌚ Feldolgozom..."
→ Bot: [Review Adaptive Card — vázlat megjelenik]
 2. [Review Card-on] "✏ Szerkesztés kérem" + "A 3. lépésben add hozzá a hőmérséklet ellenőrzést"
→ Bot: "⌚ Módosítom..."
→ Bot: [Módosított Review Adaptive Card]
 3. [Review Card-on] "✅ Jóváhagyom a vázlatot"
→ Bot: [Final Approval Card]
 4. [Approval Card-on] "✅ Ellenőriztem és jóváhagyom"
→ Bot: "⌚ PDF generálás..."
→ Bot: [Result Card — PDF letöltés link]
 5. PDF megnyitás — formázott dokumentum, agentize.eu branding, AI jelölés, jóváhagyási info
 6. [Opcionális — Telegram-ban ugyanez]
-

14. SIKERESSÉGI KRITÉRIUMOK

A PoC akkor kész, ha:

1. ☒ Bicep template egy gombnyomásra települ Sweden Central-ba
2. ☒ Teams-ből végigfut a teljes flow: kérés → generálás → review → szerkesztés → jóváhagyás → PDF
3. ☒ Telegram-ból ugyanez működik
4. ☒ PDF letölthető, formázott, tartalmazza az AI jelölést és jóváhagyási infót
5. ☒ Audit log Cosmos DB-ben: ki, mit, mikor, melyik modellel
6. ☒ EU AI Act jelölés minden AI output-on
7. ☒ Többpontos jóváhagyás működik (review + final approval)
8. ☒ Revision loop működik (szerkesztés kérés → módosítás → újra review)
9. ☒ 3 perces demó végigfuttatható hiba nélkül
